

PERSONAL TRAVEL BLOG

Step 1: Planning Your Travel Blog

Before diving into code, it's essential to have a clear plan for your travel blog. Consider the following aspects:

- Define your blog's niche and target audience.
- Decide on a name and domain for your blog.
- Outline the structure and main sections of your website (e.g., homepage, blog posts, about page, contact page, etc.).
- Choose a color scheme and overall design style that aligns with your blog's theme.

Step 2: Setting Up Your Development Environment

Make sure you have a code editor (such as Visual Studio Code, Sublime Text, or Notepad++) installed on your computer. You'll also need a web browser for testing your website.

Step 3: HTML Structure

Start building your website by creating the HTML structure. Here's a basic template to get you started:

```
index - Notepad
File Edit Format View Help
<!DOCTYPE html>
<html lang="en">
<head>
<title>Journey</title>
<meta charset="utf-8">
<link rel="icon" href="images/favicon.ico">
<link rel="shortcut icon" href="images/favicon.ico">
<link rel="stylesheet" href="css/style.css">
<link rel="stylesheet" href="css/slider.css">
<script src="js/jquery.js"></script>
<script src="js/jquery-migrate-1.1.1.js"></script>
<script src="js/superfish.js"></script>
<script src="js/sForm.js"></script>
<script src="js/jquery.jqtransform.js"></script>
<script src="js/jquery.equalheights.js"></script>
<script src="js/jquery.easing.1.3.js"></script>
<script src="js/tms-0.4.1.js"></script>
<script src="js/jquery-ui-1.10.3.custom.min.js"></script>
<script src="js/jquery.ui.totop.js"></script>
</script>
$(window).load(function () {
    $('#slider')._TMS({
        show: 0,
        pauseOnHover: false,
        prevBu: '.prev',
        nextBu: '.next',
        playBu: false,
        duration: 800,
        preset: 'random',
        pagination: false, //' .pagination',true,'<ul></ul>'
        pagNums: false,
        slideshow: 8000,
        numStatus: false,
        banners: true,
        waitBannerAnimation: false,
        progressBar: false
    });
    $('#tabs').tabs();
});
```

Step 5: Creating Content

Now, you can start adding content to your website. Create blog posts, upload captivating photos, and write engaging travel stories. Use HTML to structure your content and add images:

<!DOCTYPE html>

<html lang="en">

<head>

<title>Journey</title>

<meta charset="utf-8">

<link rel="icon" href="images/favicon.ico">

<link rel="shortcut icon" href="images/favicon.ico">

<link rel="stylesheet" href="css/style.css">

<link rel="stylesheet" href="css/slider.css">

<script src="js/jquery.js"></script>

<script src="js/jquery-migrate-1.1.1.js"></script>

<script src="js/superfish.js"></script>

<script src="js/sForm.js"></script>

<script src="js/jquery.jqtransform.js"></script>

```
<script src="js/jquery.equalheights.js"></script>
<script src="js/jquery.easing.1.3.js"></script>
<script src="js/tms-0.4.1.js"></script>
<script src="js/jquery-ui-1.10.3.custom.min.js"></script>
<script src="js/jquery.ui.totop.js"></script>
<script>
$(window).load(function () {
    $('.slider')._TMS({
        show: 0,
        pauseOnHover: false,
        prevBu: '.prev',
        nextBu: '.next',
        playBu: false,
        duration: 800,
        preset: 'random',
        pagination: false, //'.pagination',true,'<ul></ul>'
        pagNums: false,
        slideshow: 8000,
        numStatus: false,
        banners: true,
        waitBannerAnimation: false,
        progressBar: false
    });
    $("#tabs").tabs();
    $.UItoTop({
        easingType: 'easeOutQuart'
    });
});
```

```
</script>

<!--[if lt IE 9]>

<script src="js/html5shiv.js"></script>

<link rel="stylesheet" media="screen" href="css/ie.css">

<![endif]-->

</head>

<body class="page1">

<h3>Taj Mahal</h3>
```

The Taj Mahal is a world-famous white marble mausoleum located in Agra, India, built by Mughal Emperor Shah Jahan in memory of his wife Mumtaz Mahal. It is renowned for its stunning architecture and intricate decorative details and is considered one of the most iconic symbols of love and beauty in the world.

<h3>Thanjavur</h3>
```

The Thanjavur Big Temple, officially known as the Brihadeeswarar Temple, is a UNESCO World Heritage Site located in Thanjavur, Tamil Nadu, India. It is a remarkable Hindu temple built by King Rajaraja I in the 11th century and is known for its exceptional Chola architecture, especially its towering vimana (temple tower) and intricate stone carvings.

<h3>Mysore</h3>
```

The Mysore Palace, also known as the Amba Vilas Palace, is a royal palace located in Mysore, Karnataka, India. It is a stunning example of Indo-Saracenic architecture and serves as the official residence of the Wadiyar dynasty, the former royal family of Mysore. The palace is renowned for its grandeur, intricate design, and vibrant lighting during special occasions and festivals, making it a popular tourist attraction.

```

Step 6: Testing and Refinement

Open your HTML file in a web browser to see how your website looks. Make adjustments to your HTML and CSS as needed. Ensure that your website is responsive and works well on different screen sizes.

Step 7: Hosting Your Website

To make your website accessible on the internet, you'll need a domain and hosting service.

You can choose from various hosting providers, purchase a domain, and upload your HTML

and CSS files to your hosting account.

Step 8: Maintenance and Updates

Regularly update your blog with new content and make improvements based on user feedback and your evolving design preferences.
